ENTERPRISE SYSTEM AUDIT

System Architecture Report

Technology stack, module structure, request flow, and a complete page/route inventory.

Company Safari Zangu Ventures
Engagement Full-Codebase Enterprise Audit
Date 20 September 2026
Document 2 of 6
Classification Internal — Management & Engineering

Methodology: every finding in this report is drawn directly from the live codebase, database schema, and configuration — file paths and line numbers are cited throughout. No functionality is assumed to exist without direct verification.

1. Technology Stack

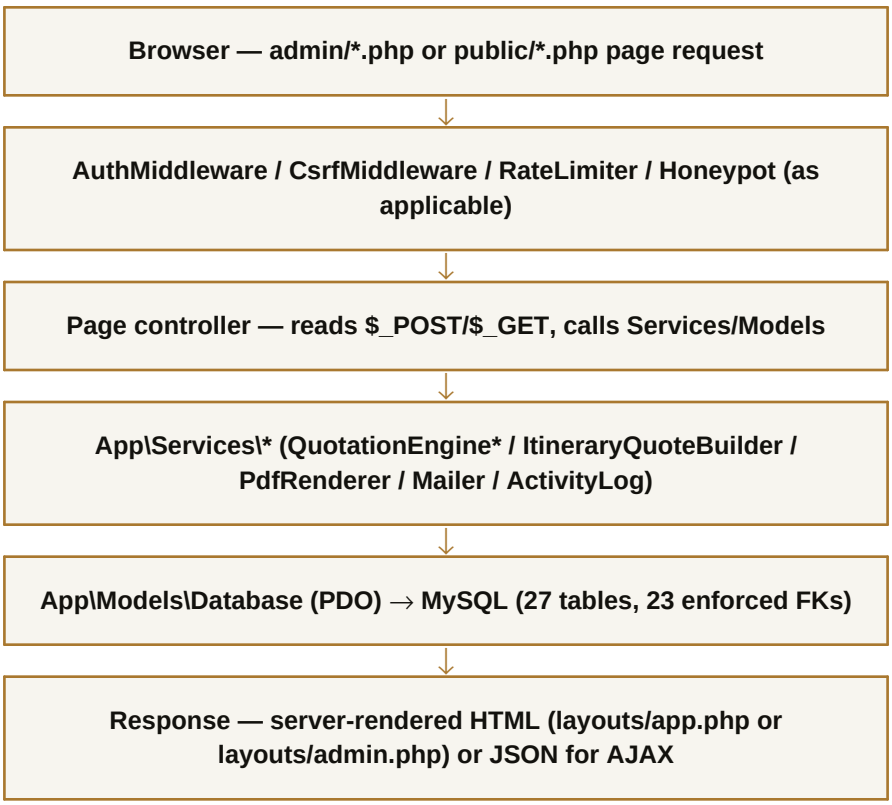
Component	Implementation	Status	Evidence
Language / Runtime	PHP 8.3.31	✓ CONFIRMED	php -v; composer.json
Architecture style	Procedural page-controllers + a real PSR-4 service/model layer under App\ (not a full MVC framework like Laravel/Symfony)	✓ CONFIRMED	app/bootstrap.php; app/{Models,Services,Middleware,Mail,Helpers}
Frontend	Server-rendered PHP views + vanilla JavaScript (no React/Vue/build step)	✓ CONFIRMED	views/*.php; assets/js/*.js — no package.json frontend deps, no webpack/vite config
Database	MySQL/MariaDB, utf8mb4, 27 tables + 1 view, InnoDB (FKs enforced)	✓ CONFIRMED	SHOW TABLES; information_schema.KEY_COLUMN_USAGE — 23 real FK constraints
Web server	Apache 2 with mod_php (NOT PHP-FPM)	✓ CONFIRMED	apache2ctl -M shows php_module; php_sapi_name()==='cli' only outside web requests; fastcgi_finish_request() unavailable — verified by direct timing test
Authentication	Session-based (PHP native sessions, httponly+samesite=strict cookies), 4-role RBAC (superadmin/admin/staff/agent)	✓ CONFIRMED	app/Middleware/AuthMiddleware.php; admin_users.role enum
Payments	PayPal (sandbox/live via PAYPAL_MODE), plus manual bank transfer instructions	✓ CONFIRMED	app/Services/PayPalClient.php; api/paypal_create_order.php
Email delivery	Hostinger SMTP via PHPMailer 7.1.1, immediate-send-in-request + 2-min cron fallback queue	✓ CONFIRMED	app/Mail/Mailer.php::sendRow()/dispatchBackground(); api/cron/process_email_queue.php
PDF generation	dompdf, rendering the same HTML templates admins view in-browser	✓ CONFIRMED	app/Services/PdfRenderer.php; api/booking_pdf.php; api/quotation_pdf.php
File storage	Local filesystem under assets/images/ and storage/uploads/ — no S3/cloud object storage	✓ CONFIRMED	api/gallery/upload.php; app/Helpers/ImageOptimizer.php
Background jobs / queue	A single DB table (email_queue) polled by cron every 2 minutes, plus a real detached OS process via exec() for immediate sends. No Redis/RabbitMQ/SQS.	✓ CONFIRMED	email_queue table; app/Mail/Mailer.php::dispatchBackground()

Component	Implementation	Status	Evidence
Analytics	First-party analytics_events table (967 rows, real traffic) + optional GA4 hook (GA4_ID constant, empty by default)	✓ CONFIRMED	analytics_events table; config/app.php:123
Rate limiting	Custom file-based per-IP limiter (App\Middleware\RateLimiter), not Redis-backed	✓ CONFIRMED	app/Middleware/RateLimiter.php
Caching layer	None found — no Redis, Memcached, APCu, or file-based query cache	✗ MISSING	grep across app/ and config/ for cache-related classes/functions: no matches
Hosting	Hostinger shared hosting (production), local Apache dev environment mirrors it	✓ CONFIRMED	config/app.php host-detection logic; DB_USER pattern 'u662187129_...' is a Hostinger cPanel convention

---

2. Architecture Flow

Not a framework-driven MVC — a procedural page-controller pattern (each admin/*.php or public/*.php file is its own entry point) backed by a real, separately-organized service and middleware layer under App\. Request flow for a typical admin action:



** QuotationEngine.php is architecturally present in this diagram but has no live callers — see the Database and Quotation Engine findings.*

3. Module Hierarchy

Path	Files	Contents
app/Middleware/	4	AuthMiddleware, CsrfMiddleware, Honeypot, RateLimiter — cross-cutting request guards
app/Models/	5	Database (PDO singleton), Booking, Customer, CustomSafariRequest, Package — thin active-record-style wrappers, most pages query directly via PDO instead
app/Services/	6	ActivityLog, BookingReminderScheduler, ItineraryQuoteBuilder, PayPalClient, PdfRenderer, QuotationEngine — the real business-logic layer
app/Mail/	4	Mailer (queue+send), EmailTemplate (13 templates, 1 shared layout), BookingConfirmationMail, CustomSafariAckMail
app/Helpers/	6	AdminIcon, Env, Formatter, ImageOptimizer, ItineraryDayCards, TripExtensions
app/Validators/	1	BookingValidator — the only formal input-validator class; most other endpoints validate inline
admin/	34	One page-controller per admin screen — see full Frontend Audit inventory
api/	30	Public + admin AJAX/form-submission endpoints, incl. api/cron/ (3 scheduled jobs) and api/gallery/ (3 upload/list/delete endpoints)
public/	12	Public-facing page entry points (thin wrappers that set page meta then include views/)
views/	7	Shared page bodies included by public/ entry points
layouts/	n/a	app.php (public site shell), admin.php (admin shell + role-filtered sidebar), navbar.php, footer.php, head.php
config/	1	app.php — every environment/business-rule constant in one file, host-derived APP_URL/BASE_PATH
assets/js/	8	No framework — vanilla JS per feature (main.js is the largest, ~530 lines after this session's additions)
sql/	27 tracked + several untracked	Migration files — a real schema_migrations table exists and is populated (27 rows), though several ad-hoc .sql files from recent sessions aren't registered in it (see Database Audit)
php/PHPMailer/	vendored	A local copy of PHPMailer also exists alongside the Composer-installed one in vendor/ — see Code Quality Audit

4. API / Endpoint Layer

30 endpoints under api/ (including 3 scheduled cron jobs and 3 gallery handlers), each requiring the same auth/CSRF/rate-limit middleware stack as the admin pages that call them where applicable.

Endpoint	Endpoint	Endpoint
analytics.php	booking_email.php	booking_pdf.php
book.php	check_booking.php	contact.php
convert_quotation.php	custom_safari.php	dashboard_stats.php
get_setting.php	itinerary_pdf.php	itinerary.php
leads.php	mailer.php (dead code)	paypal_create_order.php
quotation_email.php	quotation_pdf.php	quote.php (orphaned engine)
record_payment.php	set_hero.php	track_booking_pdf.php
track_lookup.php	upload_team_image.php	vehicle_manage.php
cron/process_email_queue.php	cron/process_reminders.php	cron/send_single_email.php
gallery/delete.php	gallery/list.php	gallery/upload.php

---

5. Complete Page Inventory — Admin Panel (31 pages)

Every admin page, its data sources, connected APIs, and verified completeness.

admin/accommodations.php

Purpose: Lodge/camp CRUD by tier
Tables: accommodations
APIs: —
Status: COMPLETE

admin/activities.php

Purpose: Paid add-on activity CRUD
Tables: activities
APIs: —
Status: COMPLETE

admin/activity_log.php

Purpose: Audit-trail viewer
Tables: activity_log, admin_users
APIs: —
Status: COMPLETE (but log itself is never written to — 0 rows)
Note: Infra built, unused

admin/analytics.php

Purpose: Traffic/conversion dashboard
Tables: analytics_events, bookings
APIs: —
Status: COMPLETE
Note: 564 lines, real aggregation queries

admin/bookings.php

Purpose: Booking management + documents
Tables: bookings, quotations
APIs: booking_pdf.php, booking_email.php
Status: COMPLETE

admin/change_password.php

Purpose: Own-account password change
Tables: admin_users
APIs: —
Status: COMPLETE

admin/commissions.php

Purpose: Agent commission approval workflow
Tables: commissions, admin_users, leads
APIs: —
Status: COMPLETE
Note: Self-approval blocked for agent role

admin/contact_messages.php

Purpose: Contact-form inbox
Tables: contact_messages
APIs: —
Status: COMPLETE
Note: incl. first_response_at tracking (this engagement)

admin/customers.php

Purpose: Customer list + cross-entity counts
Tables: customers, bookings, quotations, leads, custom_safari_requests
APIs: —
Status: COMPLETE

admin/customer_view.php

Purpose: Single-customer 360° view
Tables: customers, bookings, quotations, leads, custom_safari_requests
APIs: —
Status: COMPLETE (read-only)

admin/custom_requests.php

Purpose: 'Design Your Own' inbox
Tables: custom_safari_requests
APIs: self-AJAX
Status: COMPLETE
Note: incl. first_response_at tracking (this engagement)

admin/email_queue.php

Purpose: Outbound email log/retry
Tables: email_queue
APIs: —
Status: COMPLETE

admin/email_templates.php

Purpose: Email template editor
Tables: email_templates
APIs: —
Status: COMPLETE UI, but ZERO rows saved — every live email still renders from hardcoded PHP defaults, not an admin override
Note: Feature built, never used

admin/gallery.php

Purpose: Image library + hero-image picker
Tables: settings
APIs: set_hero.php, gallery/delete.php, gallery/upload.php
Status: COMPLETE

admin/guide.php

Purpose: In-app admin help/documentation
Tables: —
APIs: —
Status: BROKEN
Note: file_get_contents() on ADMIN_GUIDE.md, which does not exist — confirmed live PHP Warning via authenticated request

admin/index.php

Purpose: Main dashboard (role-branched: staff/admin vs agent)
Tables: leads, bookings, custom_safari_requests, quotations, contact_messages, email_queue, booking_reminders
APIs: —
Status: COMPLETE
Note: incl. Response Time widget (this engagement)

admin/invoices.php

Purpose: Financial view over bookings
Tables: bookings, quotations, commissions
APIs: booking_pdf.php
Status: COMPLETE
Note: Deliberately not a second ledger table

admin/itineraries.php

Purpose: Itinerary template builder
Tables: accommodations, vehicles, park_fees, activities, itineraries
APIs: itinerary.php
Status: COMPLETE
Note: 598 lines

admin/leads.php

Purpose: Sales pipeline (Kanban-style)
Tables: leads, admin_users, packages
APIs: self-AJAX
Status: COMPLETE
Note: Role-scoped for agents

admin/login.php / logout.php

Purpose: Admin authentication
Tables: admin_users
APIs: —
Status: COMPLETE

admin/package_edit.php

Purpose: Package + itinerary + costing editor
Tables: packages, itineraries, accommodations, vehicles, park_fees, activities
APIs: vehicle_manage.php, itinerary.php, gallery/list.php, quotation_pdf.php
Status: COMPLETE but large/complex
Note: 1,572 lines — largest functional admin file; overlaps with itineraries.php and quotation_new.php's costing logic (3 parallel implementations)

admin/packages.php

Purpose: Package list (thin index)
Tables: packages
APIs: —
Status: COMPLETE (minimal)

admin/park_fees.php

Purpose: Park entry-fee CRUD incl. resident rates
Tables: park_fees
APIs: —
Status: COMPLETE UI, PARTIAL functionality
Note: Captures resident_adult/resident_child — but nothing downstream ever reads them (see Quotation Engine Audit)

admin/poster_maker.php

Purpose: Social-media poster/caption generator
Tables: packages, itineraries
APIs: https://api.anthropic.com/v1/messages (client-side, unauthenticated)
Status: BROKEN (AI caption feature)
Note: 1,657 lines, largest admin file; the 'AI Caption' button calls Anthropic's API directly from browser JS with no API key/auth header — cannot succeed in any deployment. Poster image compositor itself works.

admin/quotation_new.php

Purpose: Quotation builder + costing calculator
Tables: quotations, custom_safari_requests, leads, bookings, packages, itineraries, accommodations, vehicles, park_fees, activities
APIs: itinerary.php, quotation_pdf.php, quotation_email.php
Status: COMPLETE, with 1 confirmed bug
Note: 1,407 lines. Line 76 queries a nonexistent park_fees.vehicle_fee column — silently caught, so the park-fee autocomplete never populates (admin must type fees with no DB suggestions)

admin/quotations.php

Purpose: Quotation list + convert-to-booking
Tables: quotations
APIs: quotation_pdf.php, quotation_email.php, convert_quotation.php
Status: COMPLETE

admin/reminders.php

Purpose: Reminder list + manual cron trigger
Tables: booking_reminders, bookings
APIs: cron/process_email_queue.php, cron/process_reminders.php
Status: COMPLETE
Note: Closest thing to an operations calendar — it's a list view, not a calendar

admin/seasonal_rates.php

Purpose: Peak/Shoulder/Low multiplier CRUD
Tables: seasonal_rates
APIs: —
Status: COMPLETE UI, PARTIAL functionality
Note: Table it edits IS used by the orphaned QuotationEngine, but NOT by the live pricing path (ItineraryQuoteBuilder) — editing this has zero effect on real quotes today

admin/team_members.php

Purpose: About-page team bio/photo CRUD
Tables: team_members
APIs: upload_team_image.php
Status: COMPLETE and correctly wired
Note: Confirmed directly: public/about.php queries team_members with a hardcoded array only as an empty-result fallback — the admin tool does drive the live page

admin/users.php

Purpose: Admin account/role management
Tables: admin_users
APIs: —
Status: COMPLETE
Note: admin/superadmin only

admin/vehicles.php

Purpose: Fleet CRUD incl. full cost breakdown
Tables: vehicles
APIs: —
Status: COMPLETE UI, PARTIAL functionality
Note: maintenance_cost_day/insurance_cost_day (added this engagement) captured but never read by any pricing calculation yet

6. Complete Page Inventory — Public Site

Homepage (index.php → views/home.php)

Purpose: Marketing homepage, package cards, 'Design Your Own' builder
Tables: packages
APIs: custom_safari.php
Status: COMPLETE
Note: 1,294 lines, largest view

packages.php

Purpose: Package listing/detail with day-by-day itinerary
Tables: packages, itineraries
APIs: —
Status: COMPLETE

book.php

Purpose: Booking form
Tables: quotations (prefill)
APIs: book.php
Status: COMPLETE

confirmation.php

Purpose: Post-booking confirmation + payment
Tables: bookings
APIs: analytics.php, PayPal
Status: COMPLETE

contact.php

Purpose: Contact form
Tables: —
APIs: contact.php
Status: COMPLETE

track.php

Purpose: Booking status self-lookup
Tables: —
APIs: track_lookup.php, track_booking_pdf.php
Status: COMPLETE
Note: Rate-limited, minimal data exposure — audited this engagement

about.php

Purpose: Team/company page
Tables: team_members
APIs: —
Status: COMPLETE
Note: Correctly DB-driven, verified directly

terms.php / privacy-policy.php / sustainability.php

Purpose: Static legal/content pages
Tables: —
APIs: —
Status: COMPLETE

404.php / 500.php

Purpose: Error pages
Tables: —
APIs: —
Status: COMPLETE

ENTERPRISE SYSTEM AUDIT

System Architecture Report

Technology stack, module structure, request flow, and a complete page/route inventory.

Company Safari Zangu Ventures
Engagement Full-Codebase Enterprise Audit
Date 20 September 2026
Document 2 of 6
Classification Internal — Management & Engineering

Methodology: every finding in this report is drawn directly from the live codebase, database schema, and configuration — file paths and line numbers are cited throughout. No functionality is assumed to exist without direct verification.

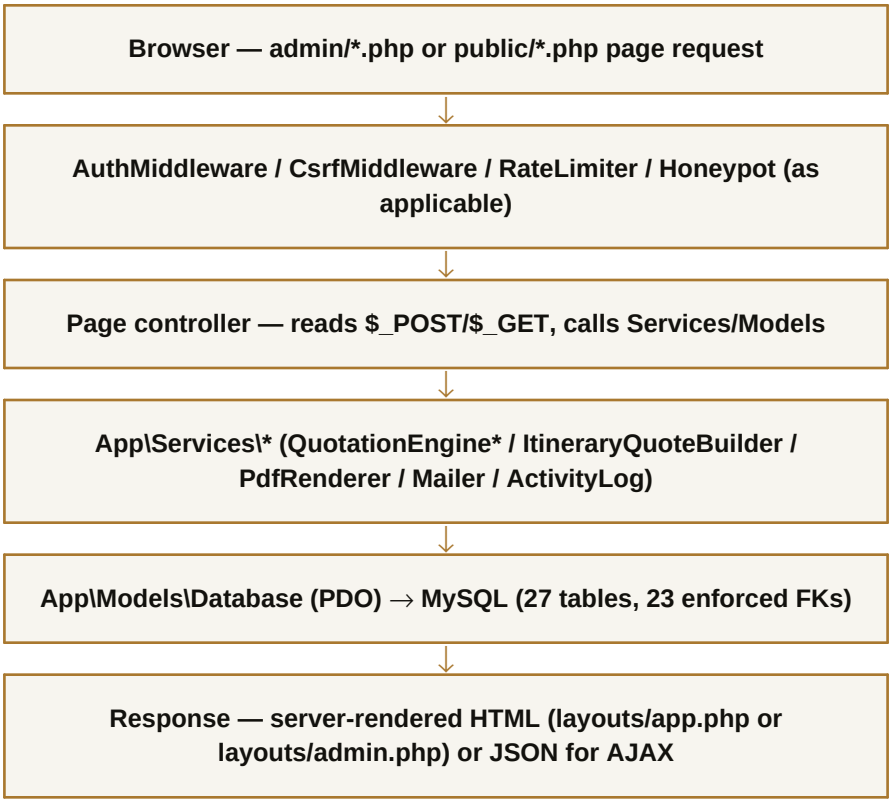
1. Technology Stack

Component	Implementation	Status	Evidence
Language / Runtime	PHP 8.3.31	✓ CONFIRMED	php -v; composer.json
Architecture style	Procedural page-controllers + a real PSR-4 service/model layer under App\ (not a full MVC framework like Laravel/Symfony)	✓ CONFIRMED	app/bootstrap.php; app/{Models,Services,Middleware,Mail,Helpers}
Frontend	Server-rendered PHP views + vanilla JavaScript (no React/Vue/build step)	✓ CONFIRMED	views/*.php; assets/js/*.js — no package.json frontend deps, no webpack/vite config
Database	MySQL/MariaDB, utf8mb4, 27 tables + 1 view, InnoDB (FKs enforced)	✓ CONFIRMED	SHOW TABLES; information_schema.KEY_COLUMN_USAGE — 23 real FK constraints
Web server	Apache 2 with mod_php (NOT PHP-FPM)	✓ CONFIRMED	apache2ctl -M shows php_module; php_sapi_name()==='cli' only outside web requests; fastcgi_finish_request() unavailable — verified by direct timing test
Authentication	Session-based (PHP native sessions, httponly+samesite=strict cookies), 4-role RBAC (superadmin/admin/staff/agent)	✓ CONFIRMED	app/Middleware/AuthMiddleware.php; admin_users.role enum
Payments	PayPal (sandbox/live via PAYPAL_MODE), plus manual bank transfer instructions	✓ CONFIRMED	app/Services/PayPalClient.php; api/paypal_create_order.php
Email delivery	Hostinger SMTP via PHPMailer 7.1.1, immediate-send-in-request + 2-min cron fallback queue	✓ CONFIRMED	app/Mail/Mailer.php::sendRow()/dispatchBackground(); api/cron/process_email_queue.php
PDF generation	dompdf, rendering the same HTML templates admins view in-browser	✓ CONFIRMED	app/Services/PdfRenderer.php; api/booking_pdf.php; api/quotation_pdf.php
File storage	Local filesystem under assets/images/ and storage/uploads/ — no S3/cloud object storage	✓ CONFIRMED	api/gallery/upload.php; app/Helpers/ImageOptimizer.php
Background jobs / queue	A single DB table (email_queue) polled by cron every 2 minutes, plus a real detached OS process via exec() for immediate sends. No Redis/RabbitMQ/SQS.	✓ CONFIRMED	email_queue table; app/Mail/Mailer.php::dispatchBackground()

Component	Implementation	Status	Evidence
Analytics	First-party analytics_events table (967 rows, real traffic) + optional GA4 hook (GA4_ID constant, empty by default)	✓ CONFIRMED	analytics_events table; config/app.php:123
Rate limiting	Custom file-based per-IP limiter (App\Middleware\RateLimiter), not Redis-backed	✓ CONFIRMED	app/Middleware/RateLimiter.php
Caching layer	None found — no Redis, Memcached, APCu, or file-based query cache	✗ MISSING	grep across app/ and config/ for cache-related classes/functions: no matches
Hosting	Hostinger shared hosting (production), local Apache dev environment mirrors it	✓ CONFIRMED	config/app.php host-detection logic; DB_USER pattern 'u662187129_...' is a Hostinger cPanel convention

2. Architecture Flow

Not a framework-driven MVC — a procedural page-controller pattern (each admin/*.php or public/*.php file is its own entry point) backed by a real, separately-organized service and middleware layer under App\. Request flow for a typical admin action:



** QuotationEngine.php is architecturally present in this diagram but has no live callers — see the Database and Quotation Engine findings.*

3. Module Hierarchy

Path	Files	Contents
app/Middleware/	4	AuthMiddleware, CsrfMiddleware, Honeypot, RateLimiter — cross-cutting request guards
app/Models/	5	Database (PDO singleton), Booking, Customer, CustomSafariRequest, Package — thin active-record-style wrappers, most pages query directly via PDO instead
app/Services/	6	ActivityLog, BookingReminderScheduler, ItineraryQuoteBuilder, PayPalClient, PdfRenderer, QuotationEngine — the real business-logic layer
app/Mail/	4	Mailer (queue+send), EmailTemplate (13 templates, 1 shared layout), BookingConfirmationMail, CustomSafariAckMail
app/Helpers/	6	AdminIcon, Env, Formatter, ImageOptimizer, ItineraryDayCards, TripExtensions
app/Validators/	1	BookingValidator — the only formal input-validator class; most other endpoints validate inline
admin/	34	One page-controller per admin screen — see full Frontend Audit inventory
api/	30	Public + admin AJAX/form-submission endpoints, incl. api/cron/ (3 scheduled jobs) and api/gallery/ (3 upload/list/delete endpoints)
public/	12	Public-facing page entry points (thin wrappers that set page meta then include views/)
views/	7	Shared page bodies included by public/ entry points
layouts/	n/a	app.php (public site shell), admin.php (admin shell + role-filtered sidebar), navbar.php, footer.php, head.php
config/	1	app.php — every environment/business-rule constant in one file, host-derived APP_URL/BASE_PATH
