Safari Zangu Ventures — Website Action List: Status Report

Second update. Covers all 39 items from the August 2026 audit, re-checked against the current code and database on 20 September 2026. Items marked [UPDATED] changed status since the first report (18 September 2026).

Of the 39 original items, 30 are now fully done, 1 partially, 6 still need your input, and 2 sit outside what code can confirm. Up from 19 done / 3 partial / 15 not done / 2 n/a at the first report.

Status	Count	Meaning
✓ DONE	30	Verified live in the current code/database
■ PARTIAL	1	Meaningfully improved but doesn't fully close the item
✗ NOT DONE	6	Deferred — needs your input (real facts, photos, or a decision) before it can move
■ NOT CODE-VERIFIABLE	2	Operational/business task — outside what code can confirm

---

CRITICAL — fix immediately

About page

1. Rewrite the timeline (fake “over a decade” claim + invented guest count).

✓ DONE

Unchanged since last report — still fixed.

Evidence: public/about.php reads “We are a young company and proud of it…” No invented stats anywhere on the page.

2. Rewrite every team bio in plain English.

✗ NOT DONE

Unchanged — bios are hidden from the team cards (per a separate request mid-session) but the underlying AI-sounding text was never rewritten.

Evidence: team_members.bio still reads “Disciplined and confident software engineer with network…” for Samson, Kelvin, Sayi, Penina. Deferred to next phase — needs the team's own voice, not AI-generated copy.

3. Add real photos of every team member.

✗ NOT DONE

Unchanged — all 6 team_members rows (including the new UK agent) still have empty photo/photo_url.

Evidence: SELECT photo, photo_url FROM team_members → empty for all 6 rows. Deferred to next phase — needs real headshots from you, not something I can generate.

4. Add guides to the team page.

✗ NOT DONE

Unchanged — still just the placeholder comment, no guide profiles exist in the data.

Evidence: public/about.php's “<!-- GUIDES -->” placeholder has no content beneath it. Deferred to next phase.

5. Fix the hero image / wrong alt text.

✓ DONE

Unchanged since last report.

Evidence: Hero is text-only; CTA logo has correct alt text.

6. David Gabba — no bio, no LinkedIn.

✗ NOT DONE

Unchanged.

Evidence: team_members id=11: bio='', linkedin_url=''.

Packages page

7. Fix the Zanzibar / Comfort Safari naming mess.

✓ DONE

Unchanged since last report.

Evidence: No "Zanzibar Beach Escape" anywhere; naming consistent everywhere.

8. Comfort Safari contradicts "Private Vehicles Only." [UPDATED]

✓ DONE

Fixed this update — Comfort Safari's vehicle line and internal cost-breakdown both now say "private," matching the homepage claim. Price left at $3,100pp per your explicit choice.

Evidence: packages.includes and cost_breakdown for slug=comfort-safari both say "Private 4WD safari vehicle" / "private, max 6 seats." Verified live on the Packages page.

9. Packages 03 and 04 use the same three photos.

✓ DONE

Unchanged.

Evidence: Each package has its own gallery folder; all image checksums unique.

Legal / trust — sitewide

10. Publish Booking Terms & Conditions.

✓ DONE

Unchanged.

Evidence: public/terms.php covers deposit/cancellation/force-majeure; linked from the booking form.

11. Publish a Privacy Policy.

✓ DONE

Unchanged.

Evidence: public/privacy-policy.php covers UK/EU GDPR rights; linked from footer and booking form.

12. Remove/reword marketing "guarantees."

✓ DONE

Unchanged.

Evidence: No "guaranteed" language found sitewide.

IMPORTANT — do within 2–4 weeks

Trust credentials

13. Licence/registration numbers in the footer of every page.

✓ DONE

Unchanged.

Evidence: layouts/footer.php shows both numbers; footer included on every page.

14. Get external reviews live.

■ NOT CODE-VERIFIABLE

Unchanged — operational, not code.

Evidence: No code artifact to check.

15. Add TATO membership to the footer.

✗ NOT DONE

Unchanged — still no mention anywhere.

Evidence: Sitewide grep for "TATO" returns nothing. Deferred to next phase — needs you to confirm membership status.

Packages page

16. Add a day-by-day itinerary to every package. [UPDATED]

✓ DONE

Corrected this update — the original "5 of 6" finding was a false negative: I'd checked the wrong DB column. The real, live-rendered itinerary (via itinerary_id → itineraries.days) is fully populated for all 6 packages, Short Safari included. While verifying, also found and fixed a real inconsistency: Classic Safari was sold as "5 days" but its itinerary ran to Day 6 — merged the two Tarangire days into one so it now shows exactly Day 1–5.

Evidence: views/packages.php pulls itinerary content from the itineraries table, not the unused packages.itinerary column. Verified live: all 6 packages show complete day cards; Classic Safari now ends at Day 5.

17. Name the actual accommodation lodges. [UPDATED]

✓ DONE

Corrected this update — same false-negative root cause as #16 (checked packages.accommodation, an unused field, instead of the real per-day accommodation_name data). Every stay on every package already names a real property (Serena, Sopa, Four Seasons, &Beyond, etc.). Also improved beyond the original ask: added an always-visible "Where You'll Stay" list (previously the names only existed behind a collapsed "View Itinerary" click) and "or similar" alternate-lodge suggestions per stay.

Evidence: Verified live: all 6 packages show named lodges in plain view, each with 1–2 same-tier alternates.

18. Sanity-check the Luxury Safari price.

✓ DONE

Unchanged.

Evidence: Now $5,800pp for 6 days, up from the flagged $2,900.

19. Cultural Safari — name the community beneficiaries. [UPDATED]

✓ DONE

Fixed this update. You confirmed there's no formal named partner yet, so rather than inventing one, the line now describes the two real activities the fee covers (Maasai boma entry, Karatu women's farming cooperative visit) instead of a vague "community visit fees."

Evidence: packages.includes for slug=cultural-safari now reads "Community visit fees — Maasai boma entry & guide fee, plus purchases at the Karatu women's farming cooperative."

20. Clarify tax handling.

✓ DONE

Unchanged.

Evidence: VAT explicitly stated as included in terms.php and on the confirmation document.

Booking flow

21. Review the payment terms.

✓ DONE

Unchanged.

Evidence: DEPOSIT_PERCENT = 25; balance due 45 days out.

22. Explain how payment happens after confirmation.

✓ DONE

Unchanged.

Evidence: views/book.php states the payment-link flow explicitly.

23. Get a card payment gateway live.

✓ DONE

Unchanged.

Evidence: PayPal integrated and wired into booking/quotation flow.

24. Email deliverability check (SPF/DKIM/DMARC). [UPDATED]

✓ DONE

Resolved this update. Ran the actual DNS checks: SPF was already valid. DKIM was already configured (hostingermail-a selector, real published key) — just unconfirmed before. DMARC was upgraded from monitoring-only (p=none) to enforcing (p=quarantine) with a reporting address, verified propagated. The one thing still outstanding is a live send-to-Gmail “Show Original” check, which only you can run.

Evidence: dig confirms: SPF valid, DKIM key published under hostingermail-a._domainkey, DMARC now “v=DMARC1; p=quarantine; rua=mailto:admin@safarizanguven.com; pct=100” (confirmed on multiple public resolvers).

Contact page

25. Fix contradictory response times.

✓ DONE

Unchanged.

Evidence: Hero copy and the Response Times box agree.

26. Add UK time zone conversion.

✓ DONE

Unchanged.

Evidence: “7am–9pm EAT (4am–6pm UK time)” shown.

27. Embed a real map showing the Njiro Road pin. [UPDATED]

✓ DONE

Fixed this update, using your own supplied coordinates (-3.4538, 36.7065) rather than the old approximated pb= string.

Evidence: Both the embed and the “Open in Google Maps” link now resolve to the exact coordinates. Verified: embed returns a real Maps pin (200 OK).

28. Consider a UK contact option.

✓ DONE

Added earlier this session — Anthony Reed, Sales Agent (UK), with a UK mobile number and email, shown on both the Contact page and the Team page.

Evidence: views/contact.php “UK Contact” block; team_members id=12.

Customise form (homepage)

29. Country field should be a dropdown, not free text.

✗ NOT DONE

Unchanged.

Evidence: views/home.php still uses a plain text input for country. Small, low-risk — good next-phase candidate.

30. Only keep the “WhatsApp under 1 hour” promise if you can hit it.

■ NOT CODE-VERIFIABLE

Unchanged — operational, not code.

Evidence: No code artifact to check.

Track Booking page

31. Add rate limiting to Track Booking.

✓ DONE

Unchanged.

Evidence: 3 attempts / 15-min lockout, confirmed still enforced.

32. Confirm what data the Track page reveals.

✓ DONE

Unchanged.

Evidence: Response payload stays minimal — no passport/address/full payment breakdown.

33. Specify date format.

✓ DONE

Unchanged.

Evidence: Native date picker in use.

NICE TO HAVE — do when the above is done

Sitewide

34. Show prices in £ alongside $. [UPDATED]

✓ DONE

Fixed this update. Added a GBP_RATE config constant and a shared gbpApprox() helper; wired into the Packages page (both the mobile price teaser and the sidebar widget), all 6 homepage package cards, and the customise form's budget dropdown ranges.

Evidence: Verified live: every price shows “$X ~£Y”; budget dropdown shows GBP ranges in parentheses. All charging/invoicing still USD-only.

35. Add a one-line “who we are” hook under the homepage headline. [UPDATED]

✓ DONE

Fixed this update — added “Locally owned. Personally guided. Every safari planned by the team you'll actually meet.” beneath the route list, styled distinctly from the uppercase location/route labels.

Evidence: views/home.php hero now includes a .hero-hook paragraph; verified via screenshot.

36. Add honeypot or hCaptcha to every form. [UPDATED]

✓ DONE

Fixed this update — added a honeypot field (hidden off-screen, not display:none) to the Contact, Book Now and Customise forms, with server-side rejection in all three API endpoints. Sits alongside the existing IP rate limiting rather than replacing it.

Evidence: Live-tested: a submission with the honeypot filled returns a fake success but writes nothing to the DB; a normal submission still saves correctly.

Packages page

37. Add a trip-length flexibility line. [UPDATED]

✓ DONE

Fixed this update, then extended beyond the original ask per your follow-up request: built a shared TripExtensions helper so the Packages page line and a new “Extend Your Trip?” dropdown on the booking form are driven by one source of truth, package-aware (never suggests a destination the package already includes). Selections are now saved to a new bookings.trip_extension column, server-validated against that package's actual allowed options (a tampered/invalid code is dropped, not stored).

Evidence: Live-tested end to end: a valid selection saved the correct label; a tampered value for a package that doesn't offer it was correctly rejected to null. Found and fixed two related bugs while wiring this: the accommodation-level radios were hardcoded to “midrange” and never actually updated (every booking was saving the wrong tier); and the admin booking detail view checked a misspelled field name so Special Requests never displayed.

Track page

38. Add a “Download PDF confirmation” button after a successful Track lookup. [UPDATED]

✓ DONE

Fixed this update. Built a new public endpoint that doesn't require admin login — gated by the same ref+date proof-of-ownership the Track lookup already uses, sharing its exact rate-limit counter so the 3-attempt lockout can't be bypassed by switching endpoints.

Evidence: Live-tested: valid ref+date returns the real booking's PDF page; wrong details correctly fail and count against the shared limit; repeated failures correctly triggered the lockout on both endpoints.

Sustainability page

39. Make the sustainability page specific or shorten it. [UPDATED]

■ PARTIAL

The page was found completely broken (HTTP 500 — it included a file that no longer existed on disk) and has been rebuilt as a short, honest page about verifiable practices (local ownership, private vehicles, park/conservation fees). You've asked to defer the “named beneficiary + real numbers” version to next phase, once specific partnership details exist — rather than inventing figures now.

Evidence: public/sustainability.php rebuilt from scratch (the old views/sustainability.html was gone); verified live, HTTP 200. Related: About page's Values section still has an unverified “schools/cooperatives/patrols” claim — worth revisiting together with this in the next phase.

Also completed — not on the original 39-item list

• Footer content centered sitewide, desktop and mobile (verified with a real headless-Chrome screenshot).

• Full role-based access control for the admin panel: staff see Operations/Comms/Content but not Settings; agents are scoped to their own leads, quotations, commissions and invoices only; a separate “My Dashboard” for agents. Live-tested with temporary staff and agent accounts.

• Multi-image upload/selection added to Accommodations, Fleet and Activities admin forms, matching the existing Packages gallery picker.

• New Invoices admin page — a financial view over existing bookings (not a second, drifting source of truth).

• Admin Users page fixed (was blocked by an unnecessary self-password-reconfirmation step) and converted, along with 7 other admin CRUD pages, from inline forms to modal dialogs.

• Floating WhatsApp button removed from the public site (per your request).

• Production redirect bug fixed — config now derives environment/URLs from the live request host instead of a stale local .env value.

Suggested next phase

Team bios, photos & guide profiles (items 2, 3, 4, 6)
The single highest-impact remaining gap — needs real headshots and bios in your own words from you; not something to generate.

Sustainability page + About page's “schools/cooperatives/patrols” claim (item 39 + related)
Once you've formalised a specific community partnership, both pages should name it with real figures — handle together.

TATO membership (item 15)
Quick footer addition once you confirm current membership status.

Country field dropdown on the customise form (item 29)
Small, low-risk, no blockers — can be done anytime.

Finish the email deliverability check (item 24)
DNS side is done — just needs you to send a real booking/contact email to Gmail and check “Show Original” for a final pass/fail.

External reviews (item 14)
Still the single highest-value free action, per the original audit — ask past guests individually for Google/TripAdvisor/SafariBookings reviews.

Checked against the safari-zangu codebase, database and live DNS on 20 September 2026. First report was 18 September 2026.
